MRI REPORT

Invoice No :	R2208489074	Invoice Date :	07/08/2022	Delivery Date :	10/08/2022	Report No. :	2208379886
Patient Name :	MR. MAHABUB ALAM		Age :	52 Y		Gender :	M
Ref. Doctor :	ASSO. PROF. DR. MD. KAMRUZZAMAN SARKER MBBS, MRCP (UK), FCPS						
Test Name :	MRI OF BRAIN						

MRI OF BRAIN

MRI scan of brain was performed using T1 and T2 weighted FLAIR sequences in axial plane.

Clinical profile:

Small hyperintense lesion is noted in right occipital lobe on T2 weighted & FLAIR images. This is hypointense on T1 weighted. Ventricles are mildly dilated. Extra cerebral CSF spaces and basal cisterns are mildly dilated also, suggestive of cerebral atrophy.

There is no shift of the midline structures. There is no evidence of intracranial space occupying lesion or obvious vascular anomaly.

No evidence of any abnormal soft tissue intensity mass seen in retrobulbar space on either side. Both optic nerves are well visualized and do not reveal sign of any compression or displacement. Globes on either side reveal normal signal intensity and appear unremarkable.

HN:

Impression:

MR scan reveals:

- Small altered signal intensity lesion in right occipital lobe possibly small vessel ischemic change.
- Age compatible degenerative atrophy of brain.

Ultrasonogram

ID No. : R103807
Patient's Name : MR. MAHABUB ALAM
Refd. By : Assoc. Prof. Dr. Md. Kamruzzaman
Specimen : Ultrasonogram of KUB & PVR

Report Summary:

Both kidneys are normal in size with well defined cortico-medullary differentiation. PCS of both kidneys are not dilated. No mass or calculus could be detected.

U Bladder is well filled with regular outlined. No mass or calculus could be detected.

MCC about 565ml & PVR is about 31ml.

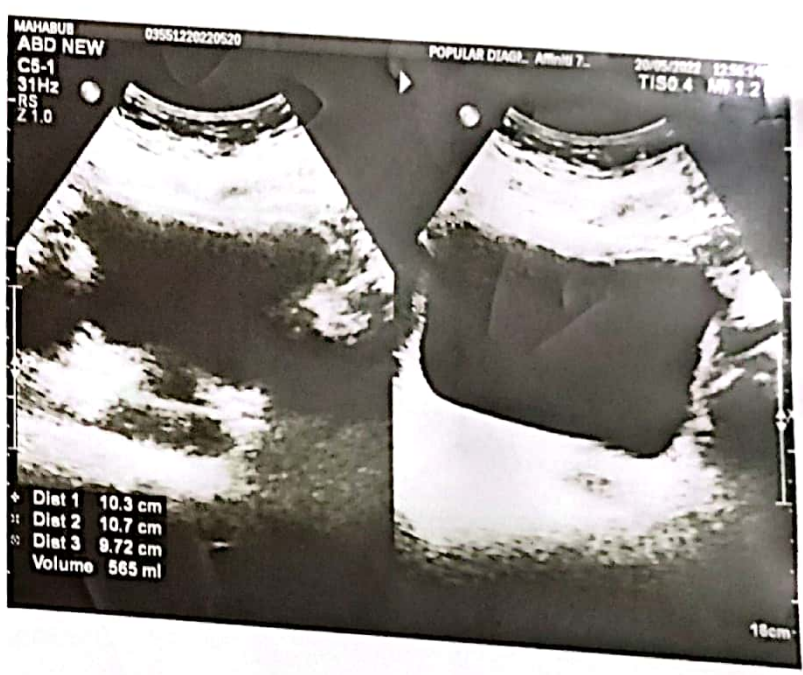

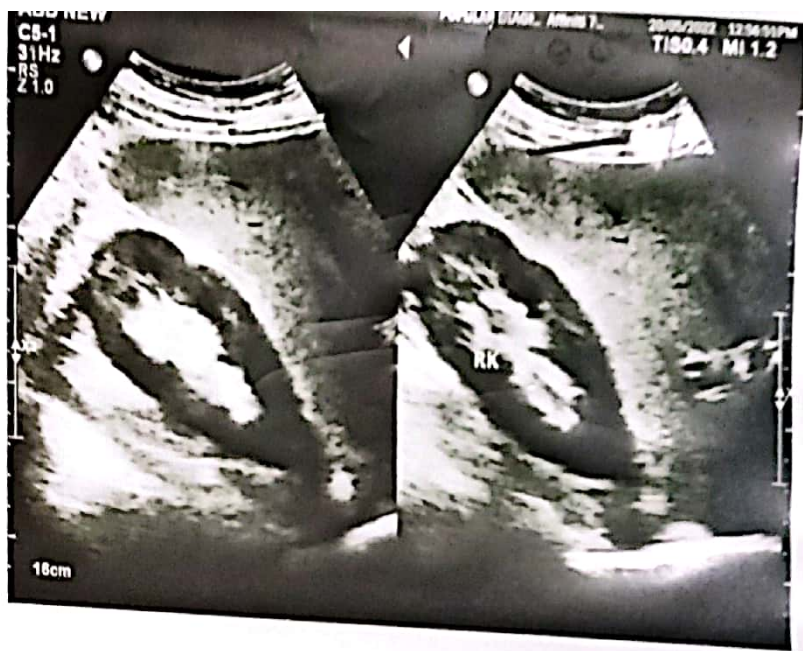

Prostate is prominent in size (46mm X 40mm) with Volume of prostate about 32ml.

Incidental Findings: Suggestive of mild fatty changes in the liver.

Comment: Borderline enlargement of the prostate gland.
Incidental Findings: Suggestive of mild fatty changes in the liver.
