Procedure : Median sternotomy with simultaneous harvesting of saphenous vein and LIMA.

Inj. Heparin administered.

Heart was stabilized with an octopus stabilizing device.

LIMA was taken through a rent in pericardium and anastomosed to the LAD using 8/0 prolene continuous sutures. LIMA pedicle fixed to the epicardium with few interrupted sutures.

Reversed segment of saphenous vein graft anastomosed to PLV using 8-0 prolene continuous sutures.

Proximal end of the graft was anastomosed to the ascending aorta after placing a side clamp and heart beating.

Heparin was neutralised with protamine. Haemostasis attained. One pacing wire placed over RV.

Sternotomy repaired after placing one mediastinal and left pleural drains.

At the end of the procedure the swab and instrument count was correct.
