Findings:

Liver is enlarged in size (measuring about 23.3 cm). Mild diffuse fatty infiltration is noted at hepatic parenchyma. No other focal lesion is seen in the hepatic parenchyma.

Intrahepatic biliary ducts are not dilated.

CBD is well visualized & normal in caliber. No intraluminal filling defect is seen. Homogeneous signal intensity bile content is noted.

Gall bladder is normal in size with dilated cystic duct. Signal void structure (measuring about 11.8x11.1 mm) is noted within the lumen of terminal part of cystic duct protruding into proximal CBD. Proximal to this structure CHD, RHD, LHD & intrahepatic biliary channels are moderately dilated. Mid & distal CBD appears normal in course and caliber. Walls are thickened. Cystic spaces are noted at fundus of gallbladder.

Pancreas is mildly atrophied and irregular in outline along its entire length and shows heterogenous signal change.

Main pancreatic duct is not dilated, but irregular in outline. No evidence of pancreatic calculus or calcification is seen.

No evidence of collection or cystic lesion is seen at peripancreatic fat plane.

Spleen is enlarged in size (measuring about 15 cm in long axis).

Impression:
