Spiral CT Scan of Brain

TECHNIQUE:

5 mm infratentorial & 10 mm supratentorial contiguous axial scans were obtained (without I/V contrast administration).

FINDINGS:

- Low attenuated areas are noted at periventricular & subcortical white matter regions.
- Third & both lateral ventricles are mildly dilated.
- Cerebral sulci, fissures & basal cisterns are deep & widened.
- The midline structures are not shifted.
- Pituitary region: No lesion at para, supra or intrasellar region.
- No mass is noted at initial course of the cranial nerves.
- No focal abnormality is detected in the brain stem or cerebellum.
- Skull bones appear normal.

IMPRESSION:

Mild age related generalized cerebral atrophy of the brain with periventricular & subcortical white matter microvascular ischemic change.
