Sample
Tissue from stomach

Investigation
Histopathology

Gross

Specimen received in formalin with proper lab no. consists of two small grayish white pieces of tissue, the larger one is measuring 0.3x0.2x0.2 cm and the smaller one is 0.2x0.1 cm. Embedded as such in one block.

Microscopic Examination

Sections reveal two fragments of gastric mucosal tissue showing a malignant neoplasm. The tumour composed of pleomorphic atypical cells having hyperchromatic nuclei and few mitoses arranged diffusely and as small solid nests infiltrating into the lamina propria. A few signet ring type cell are also seen.

Diagnosis

Tissue from stomach (Biopsy): Adenocarcinoma.
