

## Laboratory Services Division

UHID	326534	Receiving Date: 19.04.2023	
Lab Ref. No.	I-1071490	Reporting Date: 24.04.2023	
Name of Patient	Mr. Kishore Sharma	Age: 60 Years	Sex: Male
Referred By	Dr. Md. Haroon Or-Rashid	Investigation: Histopathological Exam	
Specimen	Left hemicolectomy specimen	Cabin: 605-A	

**Clinical diagnosis:** Carcinoma splenic flexure of colon (obstructed)

**Tissue or organ :** Left hemicolectomy specimen

### Gross features:

Received in 10% formalin in a container labeled with patient's name, UHID and Lab. Ref. No. is the left hemicolectomy specimen measuring about 20 cm in length. Mesenteric tissue measures 20.0x7.0x1.5cm. There is a stricture in the colon 6.0 cm away from proximal resection margin and 8.0 cm away from distal resection margin. An excavating growth is present here measuring 6.0x3.0cm. A few lymph nodes could be explored from the mesentery. Sections are taken as under:

Hemicolectomy specimen with the growth

**A1-A6** = Six sections from excavating growth area

**A7-A8** = Two sections from other areas

**A9-A10** = Two sections from proximal resection margin

**A11-A12**= Two sections from distal resection margin

**B1-B7**= Sections from lymph nodes
