USG of	Testicular- Doppler		

**DUPLEX STUDY REPORT**

**Ultrasound Examination of Scrotum:**

The skin layer is normal.  
Subcutaneous layer is hypoechoic & homogenous all over.

**Right Tactical:-** Normal in size shape and echotexture.  
No Micro or macro calcification is noted.

**Left Tactical:-** Normal in size shape and echotexture.  
No Micro or macro calcification is noted.

Both spermatic cord appears normal.

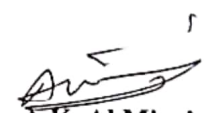

Both testicular arteries have normal blood flow.

Blood flow in both testicular artery and testicular veins appear within normal limit.  
No venous thrombosis or arterial insufficiency was observed.

**Pampiniform venous plexus are dilated in both sides, more in left side. May due to varicocele.**

**Comment: Bilateral varicocele, more in left side.  
Normal arterial blood flow in both testicle.**
