MD (Radio-Diagnosis)

Remarks : This report is only an opinion and not a final Diagnosis since Ultrasound reporting is based on reflective shadows and variations in interpretations are possible depending on conditions such as patients preparations, age & clinical history. Review scan is compulsorily advised, if this ultrasound opinion & other clinical findings/reports don't correlate.
In case of pregnancy : All anomalies cannot be ruled out by this scan, since assessment of foetal anomalies depends on foetal position, liquor volume, maternal obesity and gestational period. Hence, this report has limitations and is not for medico-legal purpose.

Advance Pathology • Ultrasonography • Echocardiography • Digital X-ray
