Part Scanned	: MRI & MRA BRAIN				

MRA OF BRAIN

Technique

Multiplaner MRA of brain done in TOF sequences. Analyses were done on MIP reconstruction with source images.

Findings:

Non visualized M1 segment of right MCA along with non visualization of its distal cortical branches.

The intracranial portion of both internal carotid arteries, anterior cerebral, posterior cerebral & left middle cerebral & arteries appear normal in origin, morphology & branching pattern. No abnormal out pouching, dilatation, flattening seen.

The basilar arteries, visualized vertebral arteries appear unremarkable.

Impression:

- Non visualized M1 segment of right MCA along with non visualization of its distal cortical branches- ? possibly occluded. DSA recommended for further evaluation.

MRI OF BRAIN

Sequences:

Axial T1, T2 & FLAIR, Sagittal T1 & Coronal T2, FLAIR & DW Image.

Findings:

DWI restricted small areas noted in right frontal region- which is hyperintense on T2WI-FLAIR image and iso to hypointense on T1WI.

The superficial CSF spaces are within normal limit. The lateral and the third ventricles are of normal size. No midline shift is noted.

The pituitary gland is normal in size and signal intensity. The parasellar areas, corpus callosum, basal ganglia and thalami appear normal.

The brainstem and cerebellum are normal in morphology and signal characteristics.

The visualized parts of the cranial nerves appear normal. Both CP angles are clear.

Normal basal flow voids are seen.

The imaged venous sinuses show normal flow voids.

Both orbits are nearly symmetrical in size.

Impression:

- Small acute infarcts in right frontal region.
- Bilateral maxillary-ethmoidal & frontal sinusitis.
