## CT Scan of Neck and Screening of Chest

### Findings :

Multiple axial non-contrast & contrast CT scans were performed.

Lobulated mildly enhancing soft tissue (about 32 mm x 24 mm x 36 mm) arising from cord region of brachial plexus, compressing subclavian vessels and bilateral subcentimetric sized level II, III, V lymphnodes.

Thyroid, salivary glands are normal.

Vascular components are normal in appearance.

Trachea, larynx, pharynx appear normal.

### Impression :

**Suspected nerve sheath tumor arising from cord region of brachial plexus, compressing subclavian vessels and bilateral subcentimetric sized level II, III, V lymphnodes.**

**DDx--Mesenchymal tumor.**

**Screening of Chest : Normal, no metastatic lesion.**

DR. Md. Mofazzal Sharif

MBBS, MD, MCPS (R & I), MPH (Epidemiology),  
Associate professor,  
Department of , Radiology & Imaging
