

MRN No.	:	084059	Date :	Wednesday, January 17, 2024	
Patient's Name	:	Mr. Helal Hossain	Age :	50 Yrs	Sex : Male
Refd. By. Prof./Dr.	:	Assoc. Prof. Dr. Manzurul Chowdhury. MBBS, FCPS (Medicine), MD (Gastroenterology)			
USG of	:	Whole Abdomen			

ULTRASOUND REPORT

- Liver** : Mildly enlarged in size, measuring 15.6 cm in mid clavicular line. Parenchymal echogenicity is mildly increased. No focal lesion is seen. Portal vein and hepatic veins appear normal.
- Gall Bladder** : Normal in size and regular in outline. Wall is thickened. Echogenic biliary sludge is noted within its lumen.
- Biliary Tree** : Normal in caliber.
- Pancreas** : Normal in size and homogenous in echotexture. Pancreatic duct is not dilated.
- Spleen** : Borderline enlarged in size, measuring about 11.9 cm along its long axis. Uniform in echopattern.
- Kidneys** : Both kidneys are normal in size, shape and position. Cortical echogenicity of both kidneys is normal. Cortico-medullary differentiation is maintained. No calculus or hydronephrosis is seen.
- Ureters** : None of the ureters is dilated.
- Urinary Bladder** : Well filled and regular in outline. Wall thickness is normal. No echogenic structure or soft-tissue mass lesion is seen in its' lumen.
- Prostate** : Normal in size. Parenchyma is homogenous with regular in surface outline.
- *** : No free fluid collection is seen in peritoneal cavity.

IMPRESSION :

- Evidence of acute on chronic cholecystitis.
- Mild hepato-splenomegaly with grade-I fatty change in liver.
