

Uterus: is anteverted in position, normal in size (L-9.19 cm, AP-4.10 cm) with homogeneous echotexture of myometrium and normal endometrial thickness. Cavity is empty.

Cul-de-sac: No free fluid is present.

Ovaries: Right ovary is normal in size shape with normal follicular activities. There is a anechoic cystic structure of size (4.90x3.34 cm) is seen in the left adnexal region. The cyst has both solid and cystic component. Left ovary is very enlarged in size of about 46.25 ml.

No ascites, lymphadenopathy or pleural effusion is seen.

**COMMENT: 1. A case of cholelithiasis.
2. Left adnexal complex cyst.**

Advice: TVS.
