

HISTOPATHOLOGY EXAMINATION REPORT

Patient's Name	Minhaz	Lab/ID no.	3143
Age	21 years	Sex	Male
Referred By	RMCH	G.P No	6425
Specimen	Tissue from right side of mandible	Date of Receipt	30-11-2022
		Date of Report	13-12-2022

CLINICAL NOTE :

Brief Clinical History :

Per operative Findings :

Clinical Diagnosis :

MACROSCOPIC FEATURES :

Five partly blackish and partly whitish pieces of tissue, largest one is measuring about 1.5×1.5×1cm. Embedded as such.

MICROSCOPIC FEATURES :

Sections from submitted specimen show odontogenic epithelium. It reveals epithelial island lined by outer tall columnar cells with polarized nuclei away from the basement membrane and inner cuboidal epithelium. Center of the islands contain loose stroma with reticulum cells.

Dx: Tissue from right side of mandible (Biopsy) : Ameloblastoma.
