MRI OF BRAIN REPORT

Clinical history

Headache

Sequences

Multiplexer T1, T2, FLAIR, DWI, ADC map & SWI sequences by 3 tesla supercon scanner.

Findings

Few tiny T2-FLAIR hyperintensity foci are seen in sub cortical & periventricular regions of both fronto-parietal regions, which are isointense in T1 and are not diffusion restricted. No susceptibility blooming seen.

Rest of the brain appears normal.

No mass effect or midline displacement seen.

Ventricular & extraventricular regions are unremarkable.

The sellar, parasellar, pineal, cerebello-pontine angle, foramen magnum regions are unremarkable.

The orbits, nose, paranasal sinuses appear normal.

- Screening cervical & dorsal spine appears unremarkable.
- Screening lumbar spine shows posterior disc herniation at L4-5 level causing anterior thecal sac indentation.

Conclusions

Microvascular angiopathy.
