### MRI FISTULOGRAM (PLAIN STUDY)

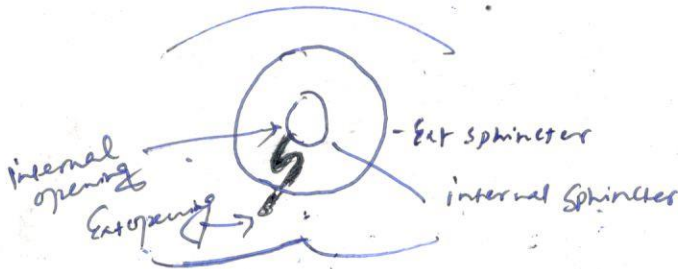

**Sequences:** T1, T2 in axial & coronal; T2- Sagittal sequences in 1.5T MRI scanner.

**FINDINGS:**

- A curvilinear fistulous tract (18 mm) with external opening is noted in right perianal region at 7 O' clock position. The tract is traversing anteriorly superiorly then posteriorly, traversing through intersphincteric plane and finally open at 7 O' clock position ~4.4 mm above the anal verge.
- No supralelevator extension of tract is seen.
- Bilateral levator ani muscles are unremarkable.
- No significant pelvic lymphadenopathy is noted.

**IMPRESSION:**

- MRI FINDINGS ARE SUGGESTIVE OF GRADE I INTERSPHINCTERIC FISTULA AS DESCRIBED. (ACCORDING TO ST. JAMES UNIVERSITY HOSPITAL CLASSIFICATION).

*Not for medico legal purpose: This is only a Radiological Impression and not Diagnosis. Like all diagnostic modalities, MRI Scan also has its limitations. Therefore MRI Scan report should be interpreted in correlation with clinical and pathological findings. In case of any discrepancy in report due to machine or typing error kindly get it rectified immediately. All typing and topographical error is regretted and if detected at any time is correctable. Please inform us immediately.*
