### MRI DORSAL SPINE

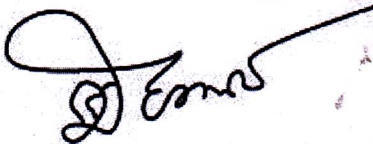

Clinical Information: No history provided.

MRI protocols: Sagittal- SE T1, FSE T2, STIR, Axial- SE T1, GE T2, Sagittal T2W for whole spine.

### Findings:

- The dorsal kyphosis is maintained with normal vertebral alignment.
- The vertebral bodies are normal in height.
- The articulating vertebral end plates present smooth margins.
- The bone marrow of the vertebral bodies appears normal.
- **Fatty marrow change is noted within body of D11 vertebra.**
- The intervertebral discs show normal signal intensity on T2WI.
- The thoracic spinal cord displays normal configuration and signal intensity.
- The prevertebral and paravertebral soft tissues show no abnormalities.
- **Screening T2W sagittal images of cervical and lumbar regions revealed mild posterior disc bulges indenting ventral subarachnoid space / thecal sac at C4-C5, C5-C6 & C6-C7 & L4-L5 levels.**

**Impression:** Normal MRI Study of Dorsal Spine.
